

Summary of Notes from Check-in

The customer would like to see Governance as its own epic. Before providing the services and giving extra information, giving preliminary information like governance is important before we start the job.

The Governance section is to be as a whole, focus on charity back-end governance. Organize the directory on the services provided. In terms of governance, it must have its own resource section.

All the resources, fundraising, grant applications, to be info pieces if there is something the users do not know or want proof on.

Feel free to play around with Marketing and Operations, does not need to have its own epic.
